

# Eorzea Homes

A quick look my what I have been working on for my two-sided marketplace

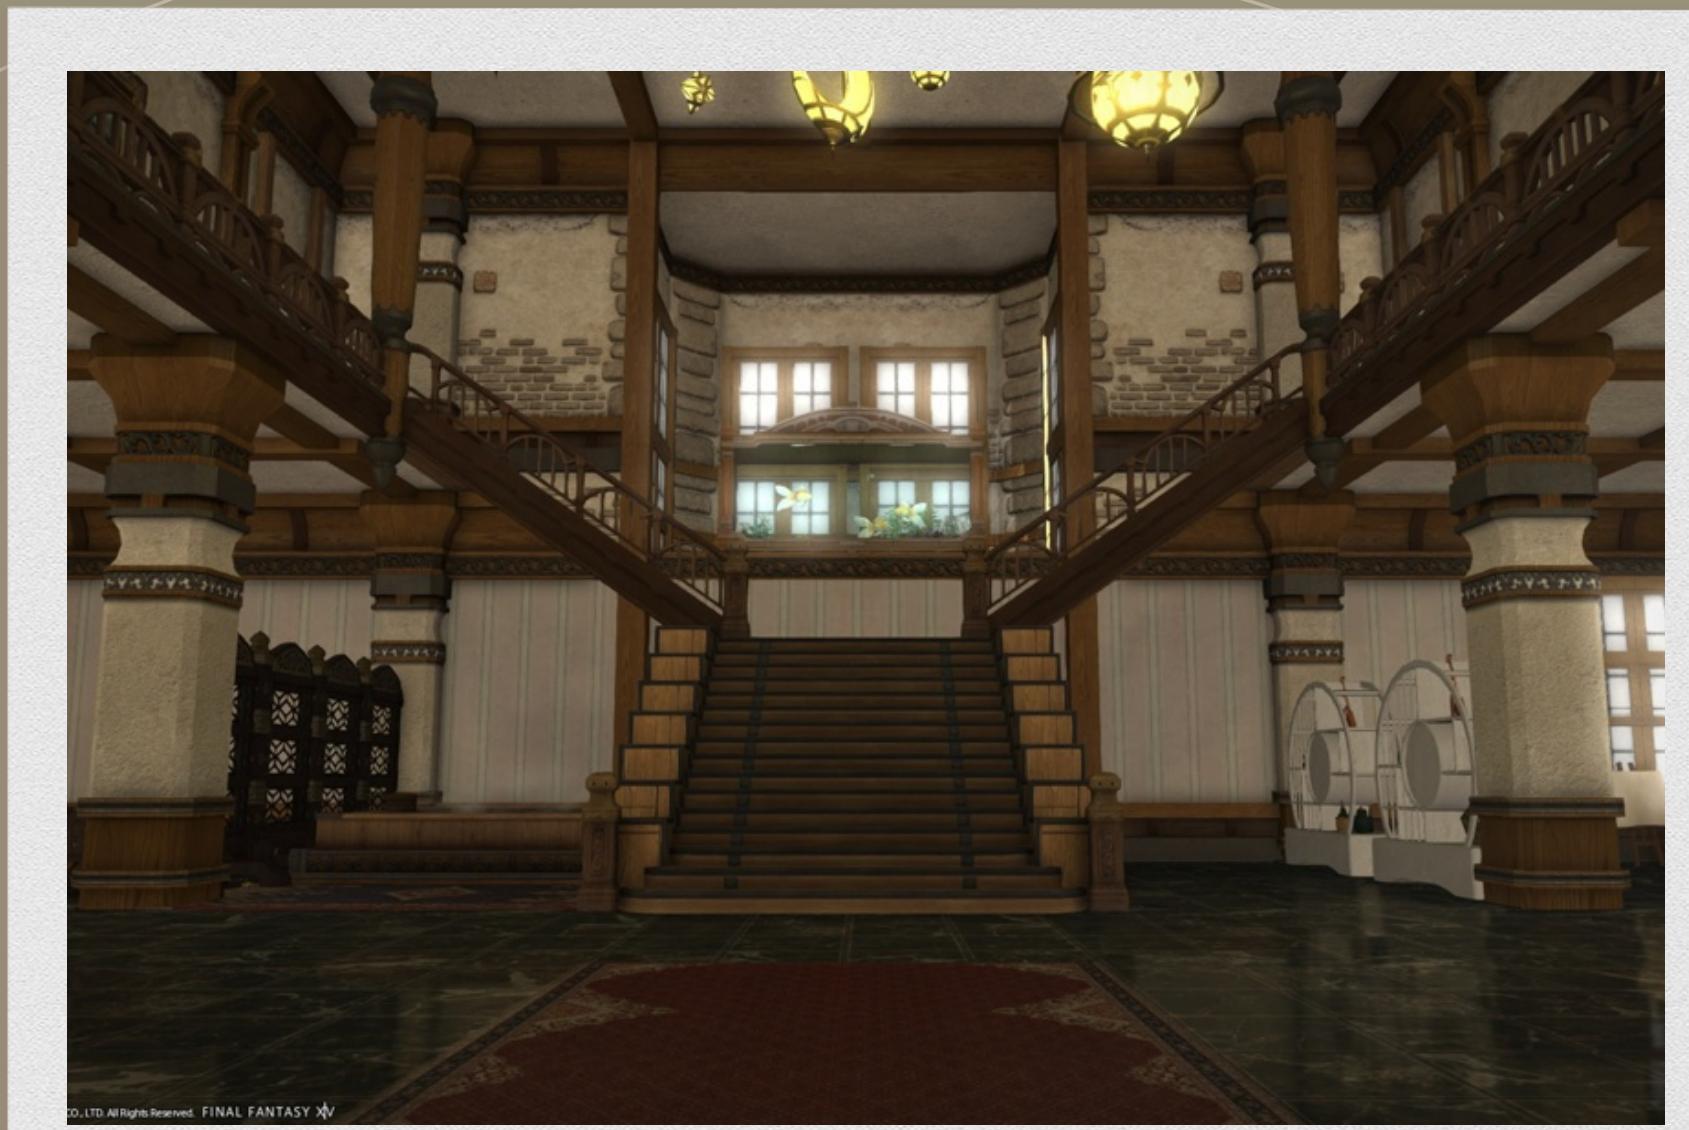

# The problem

Final Fantasy XIV is a popular online game that offers popular end-game content one area being housing. With housing comes design and decoration, to create beautifully homes

Housing before design is just an empty basic room or house

# The Solution

the marketplace app i have  
build helps connect people  
who want to have beautiful  
homes and for the creates to  
get paid real money instead of  
in-game money

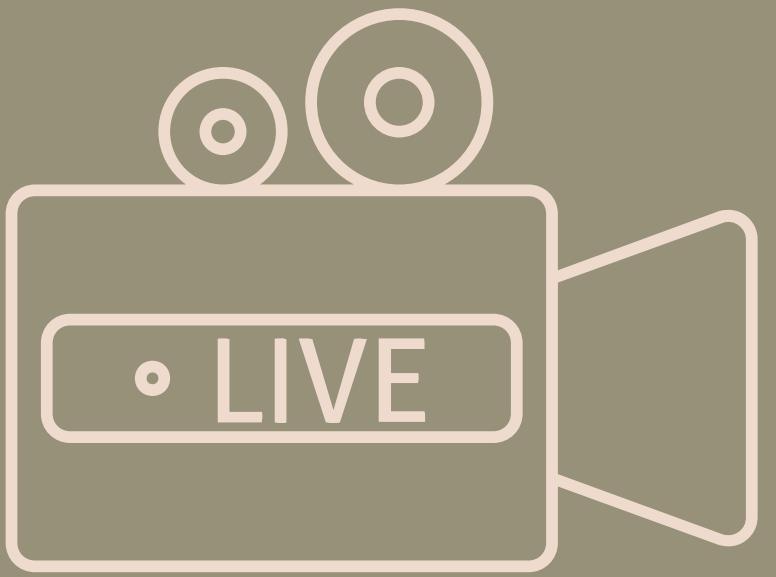

# Challanges

- Styling - deleted jquery, popper by themselves to install bootstrap js bundle
- Too much info out there. I would fine documentation telling me one way and then another would say something different - finding what worked for me

# What I enjoyed

- Styling getting things to work as a carousel
- Little things when Heroku would work for once or id implement something without it breaking.
- Seeding, watching my app come to life with actual placement instead of the word 'test' everywhere

# App Walkthrough
